## INTRODUCING GROUNDBREAKING TECHNOLOGY

### NEWTOM 5G CT

CONE BEAM COMPUTED TOMOGRAPHY (CBCT) IS A GROUNDBREAKING METHOD OF ACQUIRING 3D DIAGNOSTIC IMAGES. UNLIKE COMPUTED TOMOGRAPHY (CT) AND MAGNETIC RESONANCE IMAGING (MRI), CBCT ACQUIRES A 3D DATA SET IN A MATTER OF SECONDS. THE RESULT IS A SIGNIFICANT REDUCTION IN X-RAY EXPOSURE AND A RAPID SCAN TIME. THE IMAGES PROVIDE VIEWS OF SOFT AND HARD TISSUES THROUGHOUT THE PATIENT, AS WELL AS HIGH RESOLUTION, CLASSIC CT X-RAY IMAGING CAPABILITY.

- ◆ Brain Scans
- ◆ Dental Scans
- ◆ Middle Ear Evaluation
- ◆ Evaluate Lung Masses
- ◆ Musculoskeletal Soft Tissue Tumors
- ◆ Abdominal Scans  
*Pancreatic, Adrenals, Kidneys, Liver, etc.*
- ◆ Spinal Scans
- ◆ Urethral Evaluation
- ◆ Nasal/Sinus Disease
- ◆ Skull Trauma
- ◆ Thoracic “Met checks”  
*Cancer Screening*
